

Mobile Fire Sets

General Specifications

It provides practical and easy installation in places requiring mobility and rapid fire extinguishing solution. It provides effective solutions for fire extinguishing applications with easy installation and maintenance operations in industrial plants, mining, agriculture, energy sectors and building systems.

It can be installed quickly and responds immediately to fire hazards.

Custom design is applicable according to different conditions and needs.

Durable and efficient working properties for a long time.

Portable fire extinguishing systems are applied to all our fire group pumps

Equipment options such as filler wheel or wheel rim with a load-indexable traffic index, signaling controllable from the towing vehicle, vibration damping dampers are applicable.

It allows the integrated use of multiple outlets depending on the requirements.

Portable firefighting sets can be mounted on trailers that are manufactured according to international standards.

Can also be designed as a cabin and it provides great advantages with its sheltered design, especially when it cannot be located in a building such as a protected area.

When the container/cabin system is used, it ensures that the pump inside is protected from the negative effects of the external environment and the external environment is prevented from the noise level of pumps.

Our trailer and cabin designs; It can be easily transported by truck, train, ship, airplane and can be lifted by crane.

Technical Specifications			
Pump Model	Power	Flow Rate	Head Pressure
NM 40-250	34 kW	30-60 m ³ /h	8-10 bar
NM 50-250	50 kW	60-100 m ³ /h	8-10 bar
NM 65-250	65 kW	100-160 m ³ /h	8-10 bar
